Karachi, Sindh, Pakistan

DevOps Engineer with 2+ years of hands-on experience building CI/CD pipelines and automating cloud infrastructure. Cut deployment cycle times by 83% and reduced AWS cloud expenditure by 15% through infrastructure optimization. Proficient in AWS, Terraform, Ansible, Docker, Jenkins, and Kubernetes.

Work Experience

Implementation Engineer July 2026 – Present
Paysys Labs | *Karachi, Pakistan*

- Monitored application, server, and database health across production environments, proactively identifying and resolving performance bottlenecks before customer impact.
- Performed root cause analysis on production incidents by correlating server logs, application logs, and system metrics, coordinating with development teams to implement fixes.
- Ran ad hoc SQL queries against production databases to investigate data discrepancies and support incident troubleshooting.
- Supported deployment rollouts including pre-deployment checks, staged rollbacks, and post-deployment verification to ensure zero-downtime releases.

Jr. DevOps-IT Engineer Feb 2026 – July 2026
Digital graphiks | *Karachi, Pakistan*

- Designed and implemented CI/CD pipelines using Jenkins for web applications, cutting average release cycle time from an hour to 10mins across staging and production environments.
- Provisioned and maintained Linux infrastructure across 10+ servers, configuring Nginx and Apache virtual hosts to sustain high availability across all production deployments.
- Automated server provisioning and maintenance using custom shell scripts, reducing environment setup time by 70% and enforcing 100% deployment consistency across staging and production.
- Secured 50+ production domains by automating SSL/TLS provisioning with Certbot/Let's Encrypt and configuring DNS routing, achieving zero certificate-expiry incidents across all managed properties.
- Automated daily database and server backups via custom Bash + cron, protecting 100GB+ of production data and eliminating 2 hours/month of manual backup operations.

Jr. DevOps Engineer Jan 2025 – Nov 2025
devxonic | *Karachi, Pakistan*

- Deployed containerized web applications on Kubernetes using YAML manifests, configuring deployments, services, and ingress for scalability and accessibility.
- Built and maintained Jenkins CI/CD pipelines, reducing deployment time by 50% and minimizing manual errors.
- Optimized AWS infrastructure by rightsizing EC2 instances and implementing Auto Scaling, reducing monthly cloud expenditure by 15%.
- Reduced average response time by 35% for high-traffic production workloads by tuning Nginx server configuration and load balancing.
- Automated infrastructure provisioning using Terraform and Ansible for AWS environments.
- Implemented monitoring with Prometheus & Grafana, enabling proactive issue detection and reducing mean incident response time by 30%.

Projects

Automated PostgreSQL Backup & Cloud Upload Script **Apr 2025**

- Developed a highly reliable PostgreSQL backup system containerized in Docker using advanced Bash scripting.
- Integrated Google Drive OAuth for automated secure cloud uploads, dynamic public link generation, and real-time Discord webhook alerts.
- Engineered robust error handling, detailed logging, and timestamped backups to ensure comprehensive data protection.

AWS Three-Tier Web Application **May 2025**

- Designed and deployed a secure, scalable three-tier web application on AWS featuring an EC2/Nginx web tier, an EC2 application tier, and a private RDS PostgreSQL database tier.
- Implemented robust load balancing, auto-scaling groups, and strict IAM-based security protocols to achieve 99.9% application availability and high performance.

Automated LAMP Stack Deployment **March 2023**

- Developed Ansible playbooks and used Bash scripts to fully automate the provisioning and configuration of a complete LAMP stack (Linux, Apache, MySQL, PHP). The playbook installs necessary packages, configures Apache virtual hosts, and sets up a MySQL database, making the server environment 100% repeatable.

Core Skills

Cloud: AWS (EC2, S3, RDS, ECS, IAM, CloudWatch, VPC, Route 53)

IaC & CI/CD Tools: Terraform, Ansible, Jenkins

Containerization & Orchestration: Docker, Kubernetes (YAML manifests)

Systems & Networking: Linux (Ubuntu, CentOS), Nginx, Apache, SSH, TCP/IP, DNS, Reverse Proxies, Load Balancing, Firewall Configuration

Databases: SQL (query writing, troubleshooting), PostgreSQL, MySQL

Monitoring & Scripting: Prometheus, Grafana, htop, bash, python

Security: SSL/TLS (Certbot), VPN, Firewall Policies

Version Control: Git, GitHub

Troubleshooting & Problem Solving: Root cause analysis, incident response, performance tuning, scalability planning, network diagnostics

Education

Bachelors Business & Information Technology (BBIT)
Virtual University of Pakistan Oct 2023 – Expected 2027

ACCP Prime 2.0 Computer Science
APTECH Pakistan Dec 2021 - Dec 2024
GPA: Distinction

Certificates

AWS Certified Cloud Practitioner July 2025
Amazon Web Services

LFS101: Introduction to Linux Sep 2024
The Linux Foundation

Introduction to Jenkins July 2024
The Linux Foundation
